

Headroom left on the table: how far each reranker sits below the oracle

Hit@1
Recall@3

Oracle = the best achievable by reordering the SAME depth-10 candidate pool (candidate_ceiling.csv), so this gap is the part a better reranker could still close; the part that needs a better first stage is not counted here. Bar colour = reranker (shared across figures); the hatch distinguishes the two metrics. Each label shows achieved → oracle.
