

Absolute change vs 'original_ranking@10' on the same frozen candidate pools. Intervals are a paired bootstrap computed in this script from the per-query rankings files: 10,000 resamples of the query set (seed 20260727), percentile CI, n = 238 paired queries, one shared set of draws for every reranker. Dot colour = reranker, shared across all figures. Negative results are shown, not clipped.
