

Movement is the rank of the first relevant chunk after reranking vs its rank under 'original_ranking@10' on the same candidates. A query with no relevant chunk in the window counts as unchanged only when it is absent under both. The right panel is a subset of 'moved down', broken out because a top-3 result falling out of the top-10 changes what the user actually reads; it is drawn separately, not hidden inside the bar. NOTE: at candidate depth 10 a reranker only permutes those 10 candidates, so a relevant chunk cannot fall below rank 10 at all -- the 'top-3 → below top-10' series is zero by construction here, not by luck.
